OLEFIN

LEVEL 1 FABRIC

Created in the 1950's, Olefin (Polypropylene and Polyethylene are types) is a man made fiber that is created from plastic pellets that are melted, and then forced through a spinneret, which resembles a showerhead, creating the fiber, which is then spun into yarn and woven into fabric. Because the fiber is resistant to dyeing, color is added during the melting process, which means the color is throughout the fiber, not just on the surface, resulting in a bleach cleanable fabric, similar to Solution-Dyed Nylon.

FEATURES

- Budget Friendly
- Flat Woven
- Lightweight
- Great lightfastness (resistance to fading)

SPECS

Weight: 11.74 oz per linear yard

CLEANING

Wipe clean with a damp cloth or soap and water.
Do not use harsh chemicals.
